

Supporting an Anxious Teen

[EN-GB, EN-US]

This programme has been designed for caregivers of teenagers, ages 12 – 18, who are looking to support their teen in dealing with worry and anxiety, while learning helpful strategies to tackle their own anxiety. This programme incorporates elements of Cognitive Behavioural Therapy (CBT) such as psychoeducation, relaxation and gradual exposure, with the aim of enabling the teen to identify their anxiety, and to apply their skills in anxiety-provoking situations.

Skills & Strategies

Caregivers will gain an understanding of how anxiety affects their teenager, the anxiety cycle, and strategies to help their teen manage and alleviate these feelings and behaviours. The programme will encourage parents to focus on the positive aspects of anxiety, and to normalise anxiety in conversations with their teens.

Positive Communication

Through positive communication techniques, parents will learn proactive problem-solving strategies, and better ways to communicate with their teenagers. They will be able to use these skills to help their teens develop a more balanced and positive way of thinking, while also teaching them to use graded exposure to face their fears.

Forging Ahead

To ensure these skills lead to lasting results, the programme incorporates preventative strategies like building self-esteem and proactive problem solving. Teens will also walk away with newly learned relaxation practices and techniques, such as meditation and breathing exercises.
